Education

University of Moratuwa

BSc Engineering Honours in Computer Science & Engineering

2023 – Present

GPA: **3.43/4.00**

Technical Skills

Systems & Cloud: Linux, Azure, DigitalOcean, SSH, Docker, Docker Compose, Nginx, GitHub Actions

Networking & Reliability: DNS, TCP/IP fundamentals, HTTP/HTTPS, ports/firewalls, proxy configuration, health checks, uptime monitoring

Development: C#, C++, JavaScript, Python, Node.js, Express, SQL, .NET, Next.js, React, NestJS, PostgreSQL, Git, Bash

Selected Projects

Meow Uptime | Uptime & Incident Monitor

[GitHub](#)

Node.js · Express · Supabase · Docker · GitHub Actions

- Built a small uptime monitoring application that periodically checks HTTP services, records status and response latency, and detects incidents after consecutive failures with automatic recovery handling.
- Added a health endpoint, basic automated tests, a GitHub Actions workflow for running tests on push, and Docker support for running the application in a container.

Cloud Server Deployment & Operations

[GitHub](#)

Linux · Azure · DigitalOcean · SSH · Docker Compose · Nginx · DNS

- Built and documented reproducible Linux cloud-server setups based on hands-on work with Azure and DigitalOcean, covering SSH-key access, DNS, ports/firewall rules, Docker Compose deployments, and service troubleshooting.
- Documented proxy and tunnelling experiments including V2Ray, together with deployment and health-check scripts for diagnosing connectivity, configuration, and service failures.

ResourceHive | Multi-Tenant Resource Sharing Platform

[GitHub](#)

Next.js · NestJS · TypeScript · Jest · Vitest · PostgreSQL · Docker Compose · Nginx · GitHub Actions

- Contributed to a semester-long team project built around a microservices architecture with a Next.js frontend, Nginx API gateway, PostgreSQL database, and containerized backend services.
- Implemented application features and testing/CI work including frontend tests, service integration and end-to-end testing, database validation, and GitHub Actions checks for builds, tests, and Docker configurations.

Personal Technical Publishing Site

[Website](#)

[GitHub](#)

JavaScript · Markdown · HTML/CSS · Vercel

- Designed a lightweight publishing architecture where Markdown files are converted into static pages using reusable templates, separating article content from presentation and avoiding the need for a traditional CMS or server-backed application.
- Deployed the generated site through Vercel with a custom domain, keeping the publishing workflow simple and low-maintenance.

MIMS | Banking Management System

[GitHub](#)

Next.js · React · PostgreSQL · JWT · Git · Vercel

- Led technical development in a **five-member university team**, designing the ER model, helping define the application/API structure, establishing the Git workflow, guiding integration, and deploying the full-stack application.

C++ Windows Forms Project Template

[Marketplace](#)

▪ [GitHub](#)

C++/CLI · Visual Studio · Windows Forms

- Created and published a Visual Studio project template that simplifies starting C++ Windows Forms applications; reached **36K+ installations** through the Visual Studio Marketplace.

Initiatives

Sciber | Creator & Technical Educator

2020 – Present

youtube.com/@wearesciber

- Founded and independently operated a programming-education channel reaching **16K+ subscribers**, approximately **2.3M views**, and **99 videos**, creating beginner-focused C++ and GUI-development tutorials for Sinhala and international audiences.
